EVIDENCE LAB

Bureau shoe size chart

Measure the footprint heel to toe in centimeters. Measure twice. Then find the row.

Footprint length	Shoe size	Footprint length	Shoe size
21 cm	4	27 cm	10
22 cm	5	28 cm	11
23 cm	6	29 cm	12
24 cm	7	30 cm	13
25 cm	8	31 cm	14
26 cm	9	32 cm	15

Detective's tip

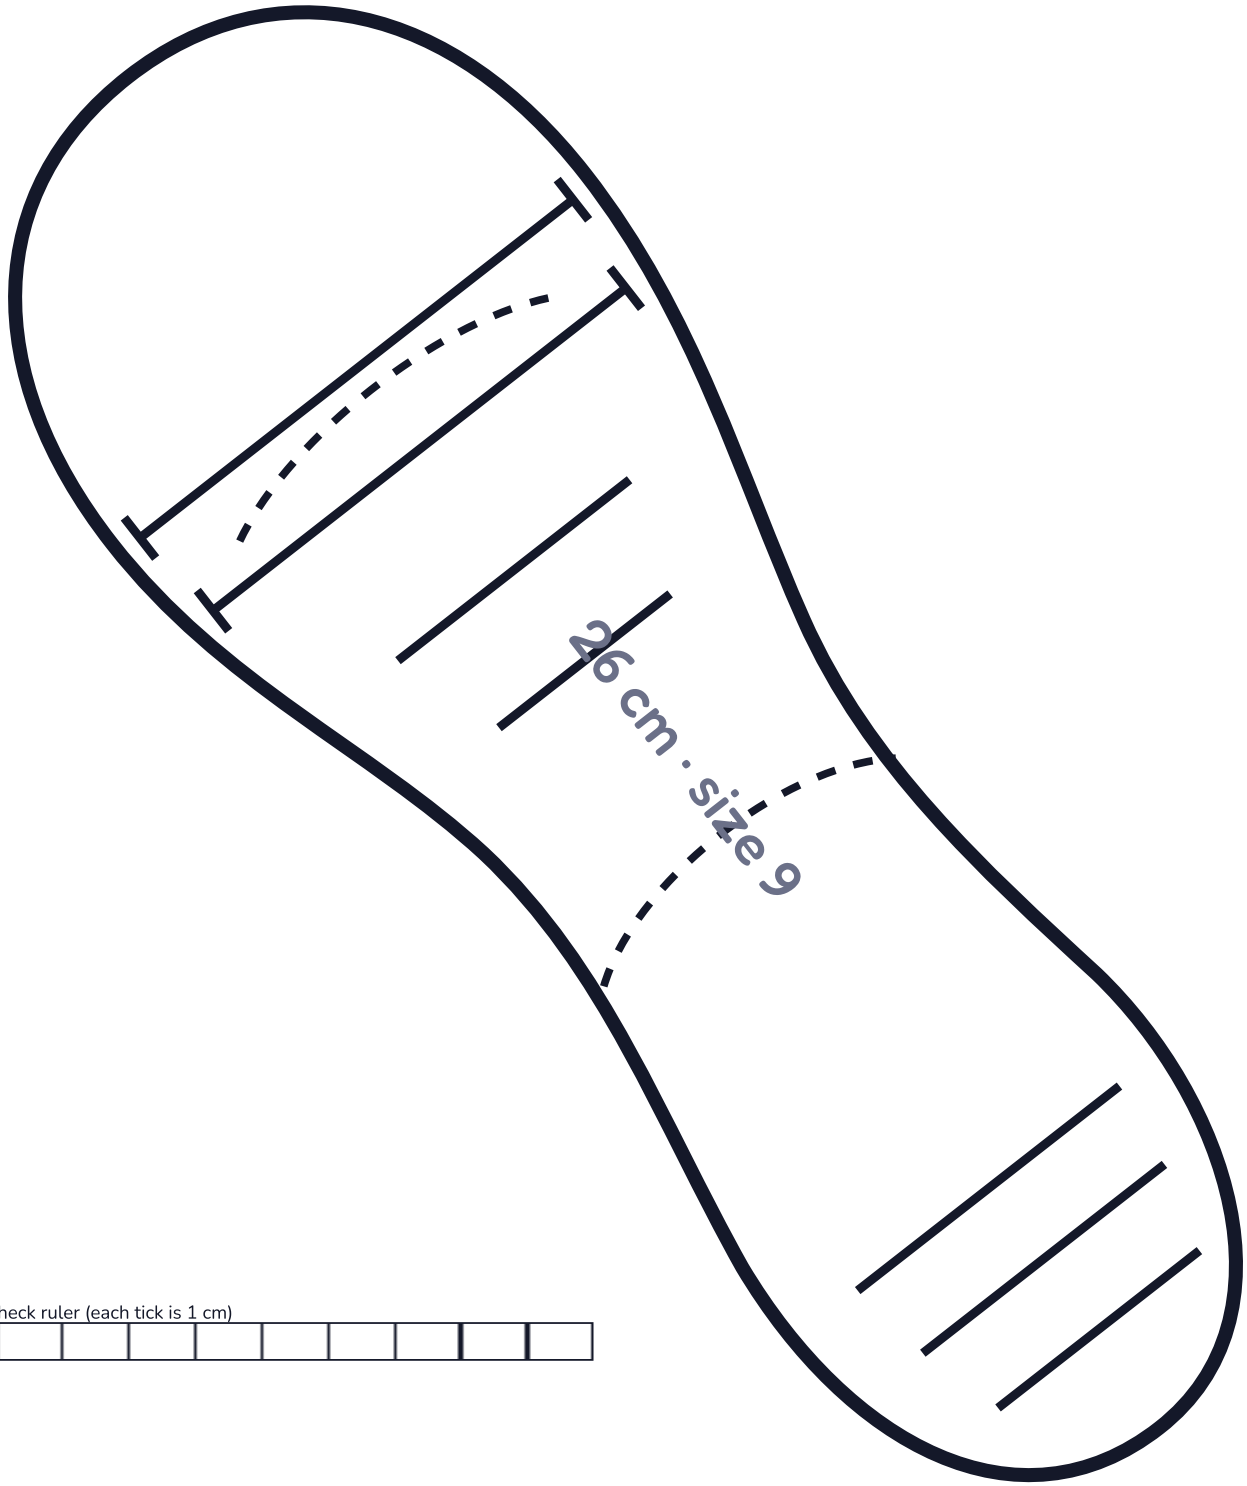

Line the zero on the ruler up with the back of the heel. Read the number at the very tip of the toe. If your squad gets two different numbers, measure once more, together, and agree on one before you look at the chart.

This is the Bureau's own chart, simplified so every centimeter maps to one size. Real shoe charts are messier; nobody at this party will mind.

FOOTPRINT TEMPLATE

Life-size footprint: 26 cm, heel to toe

Print at 100% (not "fit to page"). Check the ruler at the bottom left against a real ruler. Trace or cut out, then make the print: brush washable paint on the paper shape and press it onto plain paper, or just tape this page under the clear sheet protector at the scene.

10 cm check ruler (each tick is 1 cm)

EVIDENCE LAB

Powder cup labels

Cut out and tape to three cups and the evidence bag, a plastic spoon in each. Three are the known powders; one is the "scene powder" and is secretly baking soda too. Only baking soda fizzes with vinegar, so the scene powder matches, which is the key to Station 2.

FLOUR	POWDERED SUGAR	BAKING SODA	EVIDENCE scene powder

Running the powder test

1. One clear cup with an inch of white vinegar on the rimmed tray, the three labeled powders in a row beside it.
2. The chemist drops a spoonful of each known powder into the vinegar, one at a time. Flour: nothing. Powdered sugar: nothing. Baking soda: erupts.
3. The evidence tech drops the EVIDENCE powder into the same cup. It erupts. "The thief left this at the scene. It's baking soda. Station 2 has five lumps of it, and now you know how to open them." For Squad 2, who met the ghosts first: "Recognize it? That's what the ghosts were made of. The thief left it here."
4. Powder into vinegar, never vinegar into powder: spoons stay dry, nothing gets contaminated. At the bell, dump the cup in the bucket and pour an inch of fresh.

Fast squad bonus

Lift a fingerprint: rub a pencil on paper to make graphite dust, press a finger in it, press the finger onto clear tape, stick the tape to white paper. Instant evidence.
